## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1,3-9 and 11 drawn to a method for soldering an item.

Group II, claim(s) 15-20, drawn to a device for soldering an item.

2. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Wesseling et al. (6,005,224) disclose a method of soldering an item to be soldered in a transit oven 1 with heating of the time to be soldered 12 in a preheating zone 4 by means of a preheating device (heating section in the oven) to a temperature which lies below the melting temperature of a solder which is in contact with the item to be soldered 12. Wesseling et al. disclose subjecting the item to be soldered with a first volume flow of a fluid with a first temperature generated by a convection heating means and subjecting the item to be soldered in a soldering zone with a second volume flow of a fluid with a second temperature which is equal to or different from the first temperature which is generated by the convection heating means and cooling of the item to be soldered below the melting temperature (column 2 line 9 to column 4 line 67 and figures 1-3). Therefore, these shared features are not special technical features and therefore unity of invention is lacking and restriction is proper.
